

INVESTOR OVERVIEW · CONFIDENTIAL · 2026

Spotly

The family-outing platform — discover, plan, remember.

Spotly helps families find genuinely kid-friendly places, plan their outings with AI, and turn the memories into printed keepsakes — while giving local venues a channel to reach those families and sell. A two-sided, multi-revenue platform, GCC-first and built to scale internationally.

A weekly problem for every family

Families everywhere face the same recurring question — "where do we take the kids?" — and the tools they use weren't built for them. Meanwhile, family venues have no efficient way to reach exactly those parents.

PROBLEM

- **Decision fatigue, every weekend.** Parents default to the same few places.
- **Generic discovery fails families.** Maps surface bars, cafés & adult venues — not age-, diet- or weather-appropriate options.
- **Memories scatter** across thousands of camera-roll photos.
- **Local venues can't target parents** cost-effectively.

SOLUTION

- **AI-curated discovery** — every place vetted for kid-friendliness before it's shown.
- **An AI trip planner** tuned to your kids' ages, food & the live weather.
- **A memory map & gallery** that converts into printed albums (recurring, high-margin).
- **A merchant platform + CRM** for listings, offers, bookings & analytics.

Why now

AI makes it finally possible to curate "family-friendly" at scale and cheaply — a screen-once, reuse-everywhere model. Combined with the GCC's young, mobile-first, high-spend family demographic and an under-served local-experiences market, Spotly can build the default family-outings layer before a generic incumbent does.

A large, multi-pocket market

Spotly sits at the intersection of family leisure & experiences, local-services advertising, and personalised photo products — three large markets it monetises simultaneously.

Figures below are illustrative, top-down estimates to frame scale.

\$1.2T+

TAM

Global family / kids leisure, travel & experiences spend.

~\$40B

SAM

Family activities, bookings, local advertising & photo-printing across target regions (GCC + EU + US).

~\$600M

SOM (5-YR)

Realistic obtainable slice via subscriptions, commerce take & albums in launch markets.

WHY GCC-FIRST

Young families

High birth rates, large household sizes and strong weekend family-outing culture.

High spend & mobile-first

Top-tier smartphone penetration, app spend and disposable income per family.

Under-served

No bilingual, family-curated discovery + commerce incumbent — and heat/seasonality make weather-aware planning genuinely valuable.

Beachhead → expansion

Kuwait is already fully AI-screened (~2,700 places processed). The same low-cost pipeline rolls out region by region — Saudi, Qatar, UAE, then EU & US — so each new market launches with a pre-curated catalogue rather than an empty map.

Five reinforcing revenue streams

Spotly monetises both sides of the marketplace. Consumer discovery & bookings stay free to maximise the funnel; revenue comes from subscriptions, transaction take-rates, physical products and merchant services.

Spotly Plus subscription ①

Premium tier (~\$4.99/mo, \$39.99/yr): unlimited memory storage, full map & advanced AI curation. Recurring consumer revenue.

Printed albums & prints ②

The marquee driver. Custom photo books from a family's gallery — high AOV, high margin, emotionally sticky, repeat-purchase per trip.

Bookings & voucher commerce ③

A take-rate on prepaid vouchers and booking commissions. Free to the family; monetised on the merchant's GMV.

Merchant promotion & SaaS ④

Paid promoted placement + a tiered CRM subscription for multi-branch brands (analytics, team, redemption).

Data-light partnerships (future) ⑤

Sponsored family campaigns, tourism-board & brand collaborations, and white-label family discovery for hotels & malls — incremental, high-margin once the network is dense.

ILLUSTRATIVE UNIT ECONOMICS

Subscription

~\$40/yr ARPU at 4–8% conversion of active families; near-100% gross margin (digital).

Printed album

~\$35 AOV, ~\$15–18 contribution after print & ship; recurring per outing/season.

Commerce take

~10% of voucher/booking GMV; scales directly with merchant density & usage.

Built & in testing — not a slide deck

Spotly is a working, feature-complete product across both sides of the marketplace — shipping to TestFlight and Android testers through **49 production builds**, with the hard infrastructure (AI curation, commerce, multi-tier merchant CRM) already live.

PRODUCT

Two-sided platform live

Customer app (discover, AI planner, memories, bookings, vouchers) + merchant app + web CRM — on iOS & Android in test distribution.

CURATION

AI-screened catalogue

~2,700 Kuwait venues processed; a global screen-once cache that compounds in value and falls in cost as coverage grows.

SUPPLY

Merchant onboarding works

Four-tier brand → country → branch hierarchy with invite/claim flows, offers, scan-to-redeem and per-branch analytics; a demo brand runs end-to-end.

MONETISATION

Commerce rails in place

Voucher cart, multi-currency, QR passes & redemption, subscription paywall — one integration seam from live payments.

What's left to launch

Switch on live payments (Stripe), sign print-fulfilment partners, finalise the GCC go-live, and run paid-growth. The expensive engineering — the curation pipeline, two-sided data model and CRM — is done.

Go-to-market & moat

GO-TO-MARKET

- **Land in Kuwait** (pre-screened catalogue) → dense local supply + paid & organic family acquisition.
- **Sign anchor brands** (multi-branch family venues) via the CRM to seed offers & bookings.
- **Memory loop drives retention** — albums & passport keep families returning after each outing.
- **Expand** Saudi → Qatar → UAE → EU/US, each launching pre-curated.

DEFENSIBILITY

- **Compounding curated dataset** — screen-once, reuse-everywhere; cost per market falls over time.
- **Two-sided network effects** — more families attract venues; more venues enrich discovery.
- **Memory flywheel & switching cost** — a family's photo history & map live in Spotly.
- **Localisation moat** — bilingual Arabic/RTL, multi-currency, weather-aware: hard for a generic incumbent to retrofit.

KEY ASSUMPTIONS BEHIND THE MODEL

Acquisition

Blended CAC kept low via organic + referral (family invites) + merchant-driven traffic.

Engagement

Outings are repeat behaviour; the memory loop lifts retention & album attach-rate.

Supply density

Anchor brands + AI base catalogue make each market useful from day one.

3-year illustrative forecast

A bottom-up model of the five revenue streams. **These are illustrative management projections, not actuals** — Spotly is pre-launch (TestFlight / test distribution) with no recorded revenue yet. Figures in USD.

DRIVER / STREAM	YEAR 1	YEAR 2	YEAR 3
Active families (MAU)	15,000	90,000	320,000
Plus conversion	4%	6%	8%
① Subscriptions	\$24,000	\$216,000	\$1,024,000
② Printed albums	\$11,250	\$94,500	\$460,800
③ Commerce take (~10% GMV)	\$30,000	\$250,000	\$1,200,000
④ Merchant promo & SaaS	\$18,000	\$142,200	\$594,000
Total revenue	\$83K	\$703K	\$3.28M

GMV processed

~\$0.3M → ~\$2.5M → ~\$12M as merchant density & bookings scale.

Paying merchants

~30 → ~150 → ~500 brands/branches on promotion or CRM plans.

Album orders

~750 → ~6,300 → ~25,600 at a growing attach-rate per active family.

Path to scale

Revenue compounds as (a) more markets come online pre-curated, (b) the album attach-rate and Plus conversion mature with the memory loop, and (c) merchant density lifts the commerce take. The model is gross-margin-favourable: digital streams are near-100% margin; albums carry a healthy physical-product contribution.

Disclaimer. All financial figures, market sizes and operating metrics on this page are forward-looking illustrative estimates prepared by management for discussion only. They are not audited, not guarantees of future performance, and depend on assumptions (acquisition cost, conversion, retention, supply density, fulfilment economics and market timing) that may differ materially from actual results. Spotly has not yet launched publicly or recognised revenue.

Investment & use of funds

RAISING

\$1.0M – \$1.5M seed

To convert a finished product into a launched, revenue-generating business across the GCC, with the foundations for international expansion.

40%

Growth & family
acquisition (GCC)

30%

Product & eng:
payments, albums,
regional curation

15%

Partnerships & merchant
BD

15%

Operations & runway

12–18 MONTH MILESTONES

Q1–Q2 Public GCC launch (Kuwait); live Stripe payments; print-album fulfilment partner signed.

Q2–Q3 Scale to ~90K active families; ~150 paying merchants; album attach-rate & Plus conversion validated.

Q3–Q4 Expand to Saudi, Qatar & UAE with pre-curated catalogues; merchant SaaS tiers live.

Q4+ EU/US pilot; approach Series A on proven unit economics & multi-market traction.

Why back Spotly now

A working two-sided product, a compounding AI-curated dataset, five reinforcing revenue streams, and a defensible GCC-first beachhead — capital is for go-to-market and payments, not for figuring out whether the product can be built. It already is.
