

Merchant Portal — Test Guide

Multi-branch hierarchy: Owner → Country manager → Branch manager

This is a hands-on guide for testing Spotly’s merchant portal, where a brand manages all of its branches with role-based access. An **Owner** sees the whole brand, a **Country manager** sees their country’s branches, and each **Branch manager** sees only their own branch. We’ve set up a demo brand — “**FunZone**” — with real logins and data so you can try every role end to end.

Getting in

- Open meetspotly.com/partners and refresh the page so it loads the latest version.
- Sign in with a demo account below. The password for all of them is Spotly123!
- Use **Sign out** (top-right) to switch between roles, then sign in as the next account.

Role	Email	Sees
Owner (brand HQ)	funzone.owner@spotly.test	All FunZone branches
Country manager	funzone.kw@spotly.test	Kuwait branches
Branch manager	funzone.avenues@spotly.test	The Avenues only
Branch manager	funzone.360@spotly.test	360 Mall only
Branch manager	funzone.marina@spotly.test	Marina (pending approval)

Your own Spotly super-admin login sees everything, across every brand.

The demo brand: FunZone (Kuwait)

- **2 live branches** — *The Avenues* and *360 Mall* — each with offers, 2 voucher sales, and a booking.
- **1 pending branch** — *Marina* — which a branch manager claimed and is waiting for approval.
- A **Kuwait country manager** overseeing the branches.

What to test

1. Owner — the whole brand

Sign in as funzone.owner@spotly.test.

- Header reads **FunZone · Owner**; there are no Spotly-admin-only tabs.
- Dashboard shows **Your places / Vouchers sold / Voucher revenue** for the whole brand.
- Places lists The Avenues, 360 Mall and Marina (pending), all tagged Kuwait.
- Team lists the country manager + 3 branch managers with their scope.

What to look for — the owner sees the entire brand and can manage everything in it.

2. Country manager — Kuwait only

Sign in as `funzone.kw@spotly.test`.

- Places shows the Kuwait branches; Team lets them invite **branch managers** (not country managers).
- In a branch's details, the country is read-only — only the owner can move a branch between countries.

What to look for — a country manager is limited to their country, and can add/approve branch managers there.

3. Branch manager — one branch only (the key test)

Sign in as `funzone.avenues@spotly.test`, then as `funzone.360@spotly.test`.

- Each sees **only their own branch** — Avenues can't see 360 Mall, and vice versa. **No Team tab.**
- Bookings and Vouchers show only that branch's sales and booking.
- They can edit offers and handle bookings, but can't change the branch's country, managers, or promotion.

What to look for — a branch manager cannot see another branch's bookings or revenue — this is blocked at the data level, not just hidden on screen. This is the core of the multi-tenant security.

4. Approve a branch (self-onboarding)

- As the **owner** (or country manager), open Places — *Marina* shows “**Branch claim awaiting approval**” with Approve / Reject.
- Click **Approve** — Marina goes live and its manager is assigned.
- Sign in as `funzone.marina@spotly.test` — before approval they saw “Awaiting approval”; now they manage Marina.

What to look for — a branch manager can claim their own branch, but it stays pending until an owner/country manager approves it — and the brand always remains the owner.

5. Invite a brand-new manager (full loop)

- As the owner: **Team** → **Invite a manager** → *Branch manager* → enter an email you can sign into → Send.
- In a private window, sign in with that email — you're auto-linked to FunZone and see “Claim your branch”.
- Claim a branch (pick a country, search, claim) — then approve it back as the owner.

What to look for — a new manager can be onboarded by email and set up their own branch, with the owner approving — no spreadsheets, no manual data entry by HQ.

When you're done

While the demo is active, the two live FunZone branches also appear in the consumer app near Kuwait. Just let the Spotly team know when you've finished and we'll reset the demo.

A couple of notes: an invited manager must sign in with the exact email they were invited with, and managers self-claim *new* branches (a branch already in the brand is assigned by the owner). The mobile-app version of this portal is the next step once you're happy with it here.
